The objective of this study, therefore, is to construct a model for the management of ES information in Brazil.

Through a combination of methods, the study consisted of four phases: (1) survey and analysis of methods to systematize of sport information - to identify the fundamental elements for sports success and to review the methods to systematize information of the ES; (2) pilot study - to develop the method of collecting, cataloging and systematizing ES information in Brazil; (3) construction of the ES information management model using an entity-relationship model (ERM) for computerized management of sports data; (4) validation of the management model, through the judgment of an experts committee.

The study of the scope of these elements resulted in the selection of ten dimensions for collecting and cataloging Brazilian ES information in a MySQL Database (DB), modeled with the objective of allowing the articulation between the dimensions. The elimination of redundancies and the construction of the ERM, the standardization and categorization of the terms allowed the construction of an information management model of the ES that allows continuous updating dimensions and information mapped, composed of eight dimensions: Financial Resources; Sports Infrastructure; Sports Materials; Entities and Governance; Athletes and Sport Professionals; Events and Sport Results; Science and Technology; Legislation.

This model allows information crossing and presentation of simultaneous responses of athletes, entities, sports, their evidence and data that involve financing, infrastructure, and other dimensions.

By inserting business intelligence into sports management, this work provides the most important information for decision-making by managers, can qualify the policies and contribute to efficient communication between different sports entities....
